

Transplant fertilizer 4-10-0							
Description	Les Entreprises A. Jr. L Inc.'s transplant fertilizer is 100% natural as it is derived from sterilized bone meal and meat meal. The transplant fertilizer is rich in phosphorus and calcium and contains a small amount of nitrogen to stimulate early-season growth. It promotes the root development of plants and seedlings by slowly releasing nutrients throughout the season. It is versatile and can be used in various crops, including vegetables, flowers, roses, trees, and shrubs. It is approved for organic production by Ecocert.					Density: 18 kg/pi3	636 kg/m3
Crop		Time of application	Method of application	Dosage			
Annual /Perennials Plants	New planting	Early in the spring when plants start to grow	Mix well into the soil	105 ml/m2 (7 tablespoons/10 pi2)	27N-67P-OK	105 ml= 67 gr	
Bulbs	When sowing	When Planting	Dig a hole 2-3 times the size of the bulb, mix the transplanting fertiliser with the soil.	45 ml (3 tablespoons)	11N-27P-OK	45 ml= 27 gr	
			Place the bulb, fill the hole with the soil/fertiliser mixture and water thoroughly.
